

REPLACED BY  
CLAIM 34 ADDED

1. Method for executing a communication attempt with a mobile terminal device in accordance with the attainability status of said mobile terminal device in a cellular communication network having a Short Message Service Centre (SMSC) by the steps of:
  - querying said SMSC in said cellular network for obtaining an attainability status of said mobile terminal device,
  - delivering said communication attempt to said mobile terminal device in accordance with said attainability status.
2. Method according to claim 1, wherein said query of said SMSC further comprises a query of a Home Location Register (HLR) of the cellular communication network for an attainability status of said mobile terminal device.
3. Method according to claim 1 or 2, wherein said attainability status is obtained by evaluating connection related data stored in said SMSC and/or said HLR.
4. Method according to claim 3, wherein said connection related data are related to messages pending for delivery to said mobile terminal device.
5. Method according to claim 3 or 4, wherein said connection related data are related to the connection state of said mobile terminal device.
6. Method according to claim 3 to 5, wherein said data are location related.
7. Method according to anyone of claims 3 to 6, wherein said evaluation comprises the evaluation of data related to the communication to be attempted.
8. Method according to anyone of the preceding claims, wherein said query is executed by initiating a Short Message delivery to said SMSC, said Short Message being destined for said mobile terminal device.
9. Software tool for executing a communication attempt with a mobile terminal device in accordance with the attainability status of said mobile terminal device in a cellular communication network, comprising program code means for carrying out the steps of anyone of claims 1 to 8 when said software tool is implemented in a program run on a Short Message Service Centre, Service Centre or a network device.

REPLACED BY  
ART 34 ADIT

10. Computer program for executing a communication attempt with a mobile terminal device in accordance with the attainability status of said mobile terminal device in a cellular communication network, comprising program code means for carrying out the steps of anyone of claims 1 to 8 when said program is run on a Short Message Service Centre, a Service Centre or a network device.
11. Computer program product comprising program code means stored on a computer readable medium for carrying out the method of anyone of claims 1 to 8 when said program product is run on a Short Message Service Centre, a Service Centre or a network device.
12. Short Message Service Centre (SMSC), connected to a cellular communication network comprising a Home Location Register (HLR), comprising components for receiving messages, forwarding messages, and querying HLR data of a mobile terminal device, characterised by:
  - a component for obtaining data related to the attainability status of a mobile terminal device, and
  - a component for delivering messages according to said obtained data related to the attainability status of said terminal device.
13. Short Message Service Centre (SMSC) of claim 12, further comprising a component for evaluating said data related to the attainability status of a mobile terminal device, to obtain a attainability status.
14. Short Message Service Centre (SMSC) of claim 13, further comprising a component for generating a message according to results from the said evaluating component.
15. Network device connected to a Short Message Service Centre (SMSC) of a cellular communication network, comprising components for sending and receiving messages, characterised by:
  - a component for generating a message for querying a SMSC for data related to a mobile terminal device and transferring said data to said network device,
  - a component for obtaining an attainability status from said transferred data, and
  - a component for delivering communication attempts according to said attainability status.
16. Network device according to claim 15, wherein said cellular network further comprises a Home Location Register (HLR), and wherein said network device further comprises a

component for generating a message for inducing said SMSC to query HLR data of said mobile terminal device and transferring said data to said network device.
